

# INFUSION WARMER

(BLOOD, SERUM AND NUTRITION)

## Avs Infusion Warmer

# Avs Infusion Warmer

## Avs Infusion Warmer

The blood and serum warmer is a device that performs controlled heating of the fluids to be given to the patient in order to eliminate the possible risk of hypothermia during the infusion and transfusion processes

It is suitable for use in standard blood transfusion infusion, intravenous and nutrition.

Compact structure, ergonomic design

Dry heater system

Easy and fast adjustment possibility

Effective and homogeneous heating with 3 temperature sensors with microprocessor control

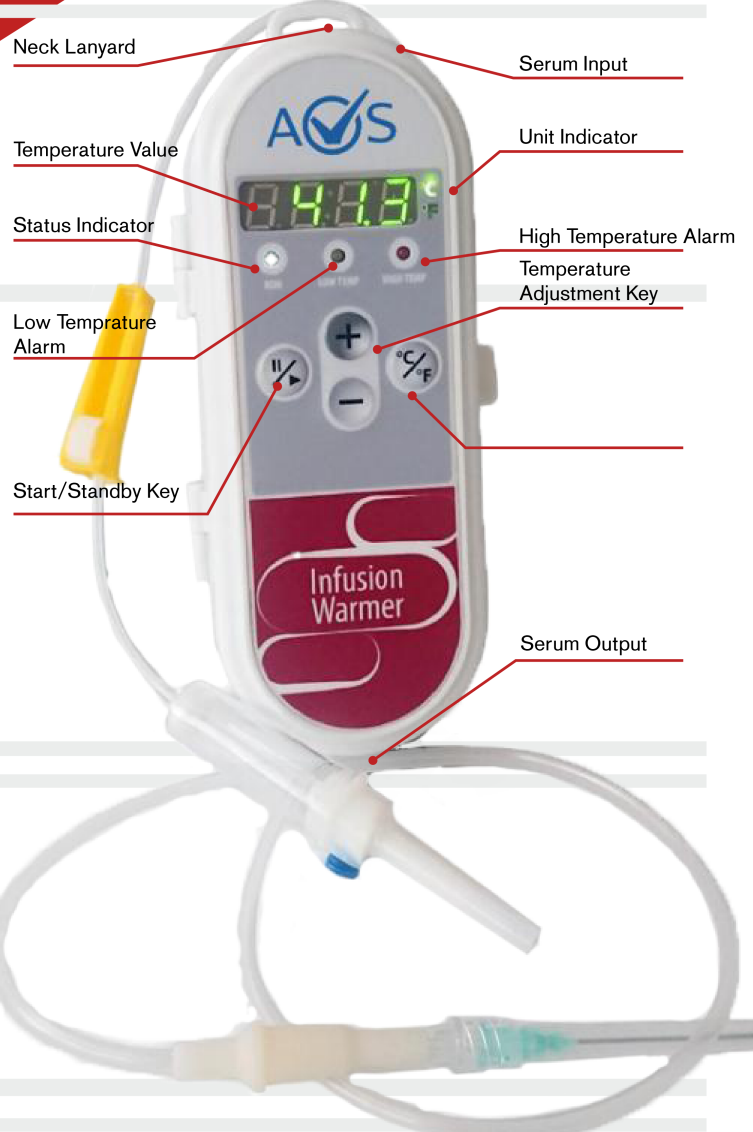

Stopping feature thanks to the overtemperature safety system

Warning Alarm System

Sensitivity: 0.1 degree

Temperature adjustment range: 33°C-42°C

The fluid temperature going to the patient can be monitored on the digital screen

## Usage Areas

- 1- Intensive Care Units
  - a) Anesthesia
  - b) Cardiovascular Surgery
  - c) Neonatal
- 2- Operating room (pre- processing before the operation)
- 3- Emergency Room
- 4- Blood Bank
- 5- Ambulances
- 6- Military Field Hospitals

## TECHNICAL SPECIFICATIONS

Temperature Setting	33°C - 42°C
Power	220V/50Hz
Power Consumption	Max 120VA
Liquid Protection Degree	IP44
Temperature Accuracy	±1.0°C
High Temp Protection	42°C ±1°C/43°C±2°C
Low Temperature Alarm	-3 °C
Heating Time	-2 min (20°C-39°C)
Weight	276 gr
Dimensions	36x67x65 mm
Usage Mode	Continuous
Models	A-WARM-D10 A-WARM-D-11
